In electronics, a comparator is a device that compares two voltages or currents and outputs a digital signal indicating which is larger. It has two analog input terminals + and \hat{v} and one binary digital output. The output is ideally $= \{, + > \hat{v}, + < \hat{v}$. A comparator consists of a specialized high-gain differential amplifier. They are commonly used in devices that measure and digitize analog ...

The following is a list of 7400-series digital logic integrated circuits. The original 7400-series integrated circuits were made by Texas Instruments with the prefix "SN" to create the name SN74xx. Due to the popularity of these parts, other manufacturers have released pin-to-pin compatible devices which kept the 7400 sequence number as an aid to identification of compatible parts.
