approaches in highly parameterized pdf

Under review as a conference paper at ICLR 2017 If $P_r(x) > P_g(x)$, then x is a point with higher probability of coming from the data than being a generated sample. This is the core of the phenomenon commonly described as "mode dropping": when there are large regions with high values of P

ABSTRACT arXiv:1701.04862v1 [stat.ML] 17 Jan 2017

Generic programming is a style of computer programming in which algorithms are written in terms of types to-be-specified-later that are then instantiated when needed for specific types provided as parameters. This approach, pioneered by ML in 1973, permits writing common functions or types that differ only in the set of types on which they operate when used, thus reducing duplication.

The syntax-rule macro system of R5RS does not seem to scale beyond simple macros. It is very difficult to write macros that compose, to assemble complex macros from already written and tested components. The previous approaches to composable syntax-rules are heavy, notationally and computationally ...

In the context of molecular modeling, a force field (a special case of energy functions or interatomic potentials; not to be confused with force field in classical physics) refers to the functional form and parameter sets used to calculate the potential energy of a system of atoms or coarse-grained particles in molecular mechanics and molecular dynamics simulations.
