Die Urmotten (Micropterigidae) sind eine Familie der Schmetterlinge (Lepidoptera). Sie sind die einzige Familie innerhalb der Zeugloptera, die die primitivste Unterordnung der Schmetterlinge darstellen. Sie kommen weltweit mit ca. 100 Arten vor. Sie sind den Käferfliegen (Trichoptera), mit denen die Schmetterlinge am nächsten verwandt sind, sehr ähnlich.

Urmotten â€“ Wikipedia

Eleocharis dulcis, the Chinese water chestnut or water chestnut, is a grass-like sedge native to Asia (China, Japan, India, Philippines, etc.), Australia, tropical Africa, and various islands of the Pacific and Indian Oceans. It is grown in many countries for its edible corms.. The water chestnut is not a nut at all, but an aquatic vegetable that grows in marshes, under water, in the mud.

Taxonomy and phylogeny Relationships to other insects. Dipterans are endopterygotes, insects that undergo radical metamorphosis. They belong to the Mecoptera, alongside the Mecoptera, Siphonaptera, Lepidoptera and Trichoptera. The possession of a single pair of wings distinguishes most true flies from other insects with "fly" in their names.

Los insectos (Insecta) son una clase de animales invertebrados del filo de los artrópodos, caracterizados por presentar un par de antenas, tres pares de patas y dos pares de alas (que, no obstante, pueden reducirse o faltar). La ciencia que estudia los insectos se denomina entomología. Su nombre proviene del latín insectum, calco del griego ἰστέον, 'cortado en medio'.
