A Norwegian study in 1928 had reported on the pathologic manifestations of untreated syphilis in several hundred white males. This study is known as a retrospective study, since investigators pieced together information from the histories of patients who had already contracted syphilis but remained untreated for some time.

Salt puts up our blood pressure. Raised blood pressure (hypertension) is a major factor in strokes, heart failure and heart attacks, the leading causes of death and disability in the UK. There is also increasing evidence of a link between high salt intake and stomach cancer, osteoporosis, obesity, kidney stones, kidney disease and vascular dementia and water retention.
