CHAPTER 2 Protein Structure 29 As described in Chapter 1, the Watson-Crick Model helped to bridge a major gap between genetics and biochemistry, and in so doing helped to create the discipline of molecular biology.

SECTION Protein Structure and Function I

Evaluation of Cell Morphology and Introduction to Platelet and White Blood Cell Morphology Kathy W. Jones, MS, MT(ASCP), CLS(NCA) 93 Chapter 5 Introduction Examination of the Peripheral

The cell (from Latin cella, meaning "small room") is the basic structural, functional, and biological unit of all known living organisms. A cell is the smallest unit of life. Cells are often called the "building blocks of life". The study of cells is called cell biology. Cells consist of cytoplasm enclosed within a membrane, which contains many biomolecules such as proteins and nucleic acids.

DNA is a long polymer made from repeating units called nucleotides. The structure of DNA is dynamic along its length, being capable of coiling into tight loops, and other shapes. In all species it is composed of two helical chains, bound to each other by hydrogen bonds. Both chains are coiled round the same axis, and have the same pitch of 34 Å (3.4 nanometres).

Excel is a popular and powerful spreadsheet application for Windows. The openpyxl module allows your Python programs to read and modify Excel spreadsheet files. For example, you might have the boring task of copying certain data from one spreadsheet and pasting it into another one.

Automate the Boring Stuff with Python

See Chapter II.C.2.j for additional guidance on the mentoring and data management plan requirements for collaborative proposals. NSF will combine the proposal submission for printing or electronic viewing. To submit the collaborative proposal, the following process must be completed: 29 (i) Each non-lead organization must assign their proposal a proposal PIN.
