Computational chemistry is a branch of chemistry that uses computer simulation to assist in solving chemical problems. It uses methods of theoretical chemistry, incorporated into efficient computer programs, to calculate the structures and properties of molecules and solids. It is necessary because, apart from relatively recent results concerning the hydrogen molecular ion (dihydrogen cation ...

Chemistry is the scientific discipline involved with elements and compounds composed of atoms, molecules and ions: their composition, structure, properties, behavior and the changes they undergo during a reaction with other substances. In the scope of its subject, chemistry occupies an intermediate position between physics and biology. It is sometimes called the central science because it ...

A supramolecular approach is used to assemble an electron donor and acceptor pair on the fibers of a molecular gelator. The donor and acceptor chromophores exhibit aggregation-induced emission, a phenomenon which eliminates the self-quenching problem.

An Introduction to Chemistry by Mark Bishop. There are two versions of this current textbook, both containing the same information but organized differently: the "Chemistry-first" version begins with actual "chemistry" – that is, chemical equations and reactions.

microarray; Genomewide expression analysis with DNA microarrays has become a mainstay of genomics research (1, 2).The challenge no longer lies in obtaining gene expression profiles, but rather in interpreting

the results to gain insights into biological mechanisms.

Going for gold: The mono- and di-chloroform solvates of $[\text{Au}_2(\mu_2\text{-bis(diphenylarsino)ethane})_2](\text{AsF}_6)_2$ undergo single-crystal-to-single-crystal transformations that result in gain or loss of only one chloroform molecule and changes in the structure and luminescence of the digold cation.

The inherent specificity and electrochemical reversibility of enzymes poise them as the biorecognition element of choice for a wide range of metabolites. To use enzymes efficiently in biosensors, the redox centers of the protein should have good electrical communication with the transducing electrode, which requires either the use of mediators or tedious biofunctionalization approaches.

Direct metabolite detection with an n-type accumulation

Carbon nanotubes have long been recognized as the stiffest and strongest man-made material known to date. In addition, their high electrical conductivity has roused interest in the area of electrical appliances and communication related applications.
