February 2015â€”Like a modern-day Pericles, Tracy George, MD, had much to traverse in her overview of leukocytosis, thrombocytosis, and erythrocytosis during a course on diagnostic hematology at last year's AACC meeting. Unlike Shakespeare's Pericles, however, Dr. George navigated the many twists of her topic with the efficiency and near-encyclopedic knowledge of an experienced tour guide.

Anemia is a decrease in the total amount of red blood cells (RBCs) or hemoglobin in the blood, or a lowered ability of the blood to carry oxygen. When anemia comes on slowly, the symptoms are often vague and may include feeling tired, weakness, shortness of breath or a poor ability to exercise. Anemia that comes on quickly often has greater symptoms, which may include confusion, feeling like ...

Acute lymphoblastic leukemia (ALL) is a cancer of the lymphoid line of blood cells characterized by the development of large numbers of immature lymphocytes. Symptoms may include feeling tired, pale skin color, fever, easy bleeding or bruising, enlarged lymph nodes, or bone pain. As an acute leukemia, ALL progresses rapidly and is typically fatal within weeks or months if left untreated.

Kinase inhibitors are an important class of drugs that block certain enzymes involved in diseases such as cancer and inflammatory disorders. There are hundreds of kinases within the human body, so knowing the kinase target of each drug is essential for developing successful treatment strategies. Sometimes clinical trials can fail because drugs bind more than one target.
