

### **computer networks data communication pdf**

A computer network, or data network, is a digital telecommunications network which allows nodes to share resources. In computer networks, computing devices exchange data with each other using connections between nodes. These data links are established over cable media such as wires or optic cables, or wireless media such as WiFi. Network computer devices that originate, route and terminate the ...

www.pragsoft.com Chapter 1: Introduction 1 1. Introduction A computer network is the infrastructure that allows two or more computers (called hosts) to communicate with each other. The network achieves this by providing a set of rules for communication, called protocols, which should be observed by all participating hosts.

Computer security, cybersecurity, or IT security is the protection of computer systems from theft or damage to their hardware, software or electronic data, as well as from disruption or misdirection of the services they provide. The field is of growing importance due to increasing reliance on computer systems, the Internet and wireless networks such as Bluetooth and Wi-Fi, and due to the ...

Network Layer It is responsible for the source to destination delivery of a packet across multiple networks. If two systems are attached to different networks with devices like routers, then N/W layer is used. Thus DLL overseas the delivery of the packet between the two systems on same network and the network
