

control of pneumatic conveying pdf

In a pneumatic system, energy that will be used by the system and transmitted through the system is stored as potential energy in an air receiver tank in the form of compressed air.

Introduction to Pneumatics and Pneumatic Circuit Problems

Technological Studies Pneumatic Systems 3 Pneumatic Systems 1 Pneumatic systems A pneumatic system is a system that uses compressed air to transmit and control energy. Pneumatic systems are used in controlling train doors, automatic production lines, mechanical clamps, etc (Fig. 1).

conveying systems The new controller can be used for all pneumatic dense phase conveying systems (thrust and plug conveying). For plug conveying over long distances, the STP 61 can also control the patented Gericke PulseLine™ system â€“ a bypass air injection. Gericke is a pioneer in the range of pneumatic conveying.
