Agenesis of the corpus callosum (ACC) is a rare birth defect (congenital disorder) in which there is a complete or partial absence of the corpus callosum. It occurs when the corpus callosum, the band of white matter connecting the two hemispheres in the brain, fails to develop normally, typically during pregnancy. The fibers that would otherwise form the corpus callosum become longitudinally ...

The corpus callosum (Latin for "tough body"), also callosal commissure, is a wide, thick, nerve tract consisting of a flat bundle of commissural fibers, beneath the cerebral cortex in the brain. The corpus callosum is only found in placental mammals. It spans part of the longitudinal fissure, connects the left and right cerebral hemispheres, enabling communication between them.

Lesions in the splenium of the corpus callosum: Clinical

Abstract. The purpose of this review is to illustrate the wide spectrum of lesions in the corpus callosum, both congenital and acquired: developmental abnormalities, phakomatoses, neurometabolic disorders, demyelinating diseases, infection and inflammation, vascular lesions, neoplasms, traumatic and iatrogenic injury, and others.

Congenital and Acquired Abnormalities of the Corpus

Het corpus callosum of de hersenbalk is een structuur in de hersenen die de twee grote hersenhelften met elkaar verbindt en zorgt dat ze informatie kunnen uitwisselen. Het bestaat uit een bundel van witte stof die vermoedelijk meer dan 200 miljoen axonen (zenuwuitlopers) bevat. Het bestaat voornamelijk uit zenuwuitlopers van cellichamen die zich elders bevinden.

Le corps calleux (ou corpus callosum) est une commissure (moyen d'union entre deux parties) transversale du cerveau présente chez les mammifères placentaires [1]. C'est un faisceau d'axones (fibre nerveuse qui correspond au prolongement long, mince et cylindrique du corps cellulaire d'un neurone) interconnectant les deux hémisphères cérébraux. C'est la plus importante commissure du ...

Agnesis of the Corpus Callosum, ACC
Agenesis of the Corpus Callosum (ACC) is a rare congenital anomaly characterized by the absence or partial absence of the corpus callosum, the large nerve fiber bundle that connects the two hemispheres of the brain. It is caused by a failure of the corpus callosum to form properly during fetal development. The condition is often associated with other brain abnormalities and can lead to a range of neurological and cognitive symptoms. The severity of the symptoms varies significantly between individuals, with some people having mild or no symptoms, while others experience more severe cognitive and behavioral challenges. Diagnosis is typically made through imaging techniques such as MRI or CT scans. Treatment is primarily supportive, focusing on addressing the specific symptoms and providing educational and behavioral interventions. Research is ongoing to better understand the underlying mechanisms and potential treatments for this condition.
