Apoptosis (from Ancient Greek ἀπόπτωξις, "falling off") is a form of programmed cell death that occurs in multicellular organisms. Biochemical events lead to characteristic cell changes and death. These changes include blebbing, cell shrinkage, nuclear fragmentation, chromatin condensation, chromosomal DNA fragmentation, and global [vague] mRNA decay.

Biophotons (from the Greek βίωσις, meaning "life" and φῶς, meaning "light") are photons of light in the ultraviolet and low visible light range that are produced by a biological system. They are non-thermal in origin, and the emission of biophotons is technically a type of bioluminescence, though bioluminescence is generally reserved for higher luminance luciferin/luciferase systems.

A systematic survey of 18 TCGA tumor types reveals how the mutational load of tumors shapes and is shaped by the ongoing immune response, identifying sequence changes and copy number amplifications that favor immune evasion, as well as point mutations that are associated with high cytolytic activity and can be explored as targets for immunotherapy.

a. About Reviews. Trends in Microbiology Review articles form the core of each monthly issue and are invited from leading researchers in a specific field. These articles offer a balanced account of newly emerging or rapidly progressing fields and provide a guide to the most relevant recent literature and prospects for future research.

As the highest-ranked open access journal in its field, Genome Biology publishes outstanding research that advances the fields of biology and biomedicine from a genomic and post-genomic perspective. Our responsive international editors provide excellent service and communication to authors throughout the entire publishing experience.

Differences in ontogeny, activation status and localization drive the generation of diverse myeloid cell phenotypes in tumors. • Unsupervised high-dimensional analysis of tumor-infiltrating macrophages in human tumors revealed a large number of subpopulations that do not correspond to M1/M2 polarization.

1. INTRODUCTION - OVERVIEW - Biology as a science deals with the origin, history, process, and physical characteristics, of plants and animals: it includes botany, and zoology. A study of biology includes the study of the chemical basis of living organisms, DNA. Other related sciences include microbiology and organic chemistry.
