Surface reconstruction refers to the process by which atoms at the surface of a crystal assume a different structure than that of the bulk. Surface reconstructions are important in that they help in the understanding of surface chemistry for various materials, especially in the case where another material is adsorbed onto the surface.

A review about the application of response surface methodology (RSM) in the optimization of analytical methods is presented. The theoretical principles of RSM and steps for its application are described to introduce readers to this multivariate statistical technique.

Carbon black (subtypes are acetylene black, channel black, furnace black, lamp black and thermal black) is a material produced by the incomplete combustion of heavy petroleum products such as FCC tar, coal tar, ethylene cracking tar, with the addition of a small amount of vegetable oil. [citation needed] Carbon black is a form of paracrystalline carbon that has a high surface-area-to-volume ...

In this paper, we describe the effect of the bioconjugation chemistry of biomolecules on GNPs, in particular GNP size, surface chemistry and influence of linker and spacer length on their functionality (i.e. bioactivity).

NEET 2019 SYLLABUS – The NEET 2019 will be conducted by National Test Agency (NTA) from the following year i.e 2019. The syllabus will be released under the guidelines of the agency and its authorities. The syllabus will be released online so the candidates are requested to keep themselves updated through the official website or the link which will be provided further below.
