A pacemaker (or artificial pacemaker, so as not to be confused with the natural pacemaker of the heart) is a medical device that generates electrical impulses delivered by electrodes to contract the heart muscles and regulate the electrical conduction system of the heart.. The primary purpose of a pacemaker is to maintain an adequate heart rate, either because the heart's natural pacemaker is ...

Artificial cardiac pacemaker - Wikipedia

The heart is a muscular organ in most animals, which pumps blood through the blood vessels of the circulatory system. Blood provides the body with oxygen and nutrients, as well as assists in the removal of metabolic wastes. In humans, the heart is located between the lungs, in the middle compartment of the chest.. In humans, other mammals, and birds, the heart is divided into four chambers ...
