

fuzzy analytical hierarchy process pdf

A fuzzy concept is a concept of which the boundaries of application can vary considerably according to context or conditions, instead of being fixed once and for all. This means the concept is vague in some way, lacking a fixed, precise meaning, without however being unclear or meaningless altogether. It has a definite meaning, which can be made more precise only through further elaboration ...

Mental Modeler: A Fuzzy-Logic Cognitive Mapping Modeling

AHP (Analytic Hierarchy Process) is a structured technique for organizing and analyzing complex decisions. It is based on the idea of breaking down a decision into a hierarchy of more manageable sub-problems, each of which can be analyzed independently. The results of the analysis are then aggregated to provide a ranking of the alternatives. The process is iterative and allows for the inclusion of subjective judgments and preferences.

Application of AHP (Analytic Hierarchy Process)

Multi-Criteria Wind Turbine Selection using Weighted Sum

Complexity characterises the behaviour of a system or model whose components interact in multiple ways and follow local rules, meaning there is no reasonable higher instruction to define the various possible interactions.. The term is generally used to characterize something with many parts where those parts interact with each other in multiple ways, culminating in a higher order of emergence ...

Abstract Islands often are confronted with severe energy challenges especially those far from the main land which operate as isolated energy systems.

Multi-Criteria Decision Support Methods for Renewable

The growing dependence of critical infrastructures and industrial automation on interconnected physical and cyber-based control systems has resulted in a growing and previously unforeseen cyber security threat to supervisory control and data acquisition (SCADA) and distributed control systems (DCSs).

Cyber security risk assessment for SCADA and DCS networks

4.5. Network model is a database model conceived as a flexible way of representing objects and their relationships. This model is often used as it puts obligations to the workflow of the organization these obligations very important in business processes and represents these obligations in maps.

Overcoming business process reengineering obstacles using

ABSTRACT. Selecting a project team is a complex multi-criteria decision-making problem. For this reason, one appropriate way to tackle such problems involves the use of multi-criteria decision aid methods.

With Robotic Process Automation, you can easily automate such repetitive tasks in a given business process. Referring to the example of Invoice Processing, RPA can read emails, download and read PDFs, maintain data in Excel sheets, update backend ERP systems, while approvals and quality checks remain manual as they need specialized skills, judgement and knowledge.
