Geometry (from the Ancient Greek: $\gamma\epsilon\omicron\mu\epsilon\tau\epsilon\rho\acute{\alpha}$; geo-"earth", -metron "measurement") is a branch of mathematics concerned with questions of shape, size, relative position of figures, and the properties of space. A mathematician who works in the field of geometry is called a geometer.. Geometry arose independently in a number of early cultures as a practical way for dealing with lengths ...

Euclid set forth the first great landmark of mathematical thought, an axiomatic treatment of geometry. He selected a small core of undefined terms (called common notions) and postulates (or axioms) which he then used to prove various geometrical statements. Although the plane in its modern sense is not directly given a definition anywhere in the Elements, it may be thought of as part of the ...

Wherever matter exists, it bends the geometry of spacetime. This results in a curved shape of space-time which can be understood as gravity. The white lines on the picture on the right represent the effect of mass on space-time.. In classical mechanics, the use of spacetime is optional, as time is independent of motion in the three dimensions of Euclidean space.
