One species of bat feeds on the blood of large mammals. This is the common vampire bat, which lives only in Latin America and is probably best known for feeding on the blood of cattle.

### **Steps to Writing a Summary - Mrs. Hatzi**

In the broadest circumscription, Insecta sensu lato consists of all hexapods. Traditionally, insects defined in this way were divided into "Apterygota" (the first five groups in the table) "the wingless insects" and Pterygota "the winged insects. However, modern phylogenetic studies have shown that "Apterygota" is not monophyletic, and so does not form a good taxon.

### **Insect - Wikipedia**

The scale insects are small insects of the order Hemiptera, suborder Sternorrhyncha. They comprise the superfamily Coccoidea, previously placed in the now obsolete group called "Homoptera". There are about 8,000 described species of scale insects.
