This volume explores databases containing genome-based data and genome-wide analyses. This book covers databases from all eukaryotic taxa, except plants. The chapters describe database contents and classic use-cases, which assist in accessing eukaryotic genomic data and encouraging comparative ...

Genomics is an interdisciplinary field of science focusing on the structure, function, evolution, mapping, and editing of genomes. A genome is an organism's complete set of DNA, including all of its genes. In contrast to genetics, which refers to the study of individual genes and their roles in inheritance, genomics aims at the collective characterization and quantification of genes, which ...

Whole genome sequencing (also known as WGS, full genome sequencing, complete genome sequencing, or entire genome sequencing) is the process of determining the complete DNA sequence of an organism's genome at a single time. This entails sequencing all of an organism's chromosomal DNA as well as DNA contained in the mitochondria and, for plants, in the chloroplast.

The Standards. Published in Science in 2015 (), the Transparency and Openness Promotion guidelines include eight modular standards, each with three levels of increasing stringency. Journals select which of the eight transparency standards they wish to implement and select a level of implementation for each.

Ye et al. comprehensively analyzed alterations of clock genes and circadian rhythms across multiple human cancers and revealed strong interactions between clock genes and clinically actionable genes, which highlights the clinical utility of circadian timing in cancer chronotherapy.

2.2. Big Data analytical methods – related to Q2. To facilitate evidence-based decision-making, organizations need efficient methods to process large volumes of assorted data into meaningful comprehensions (Gandomi & Haider, 2015). The potentials of using BD are endless but restricted by the availability of technologies, tools and skills available for BDA.

Conclusions. We have defined a gut-brain axis that regulates glucose metabolism mediated by antagonistic fibroblast growth factors. From the intestine, bile acids stimulate FGF15 secretion, leading to activation of the FGF receptors in hypothalamic AGRP/NPY neurons.

Background and Purpose – Persons with cognitive impairment, as assessed by cognitive tests, are at a higher risk of stroke. Subjective memory complaints might be an earlier marker for stroke, especially in persons with higher education. Their cognitive reserve might mask their cognitive impairment during cognitive testing. In a population-based setting, we investigated the association between ...

Submission Method A journals make the final published version of all NIH-funded articles available in PubMed Central (PMC) no later than 12 months after publication without author involvement. The start date shown for each journal is the earliest publication date that meets this requirement. Enter a journal name below to see if it uses Submission Method A.
