

plant canopies their growth pdf

Mutualism is a species-to-species interaction in which both the biotic factor and the plant are benefited by the relationship. Examples of beneficial influence on plant growth and development through mutualism are: (1) The symbiotic relationship of the Rhizobium bacteria and leguminous plants. The rhizobia live in the roots of the legume and obtain their supply of energy from the host plant.

Biotic Factors: Interactions Affecting Plant Growth

Canopy structure is the organization or spatial arrangement (three-dimensional geometry) of a plant canopy. Leaf Area Index (LAI), leaf area per unit ground area, is a key measure used to understand and compare plant canopies. It is also taller than the understory layer.

Canopy (biology) - Wikipedia

A vine (Latin vĀ«nea "grapevine", "vineyard", from vĀ«num "wine") is any plant with a growth habit of trailing or scandent (that is, climbing) stems, lianas or runners. The word vine can also refer to such stems or runners themselves, for instance, when used in wicker work.. In parts of the world (including the British Isles), the term "vine" usually applies exclusively to grapevines (), while ...
